

## **"JAF Inventory Track."**

All JA Flower Service customers now have the ability to track shipments by individual boxes!

JA Flower Service has provided shipment tracking for sometime now; this newly upgraded tracking feature allows you and the grower to determine the information on a "per box" basis. It only takes a request to the farm to utilize the FREE Cargomaster labeling program. Once a request is made in Bogotá or Medellín Colombia a representative from Cargomaster will visit the farm and install the labeling system, in Guayaquil and Quito a Fresh Logistics representative will provide installation. Once installed you have the ability to select the specific information about a box that the web-based system can report to you 24/7.

With this system no more guessing which boxes have "made" the shipment and which were delayed. You can track product type, grade, box size, color or assortment, **anything** you need including pricing or cost information. Sell from your "flying" inventory with confidence.

JA Flower Service will provide a username and password, even if you do not customize the labels or the farms aren't utilizing the free labeling program, there is still the ability to see boxes getting scanned and received without the customized detail.

This service saves time, allows for the collection of accurate information and most importantly gets your shipments to market faster and more efficiently.

**There is no additional cost to you or the farm.**

Call your JA Flower Service representative for a demonstration today! Don't wait to utilize this dynamic competitive advantage.
